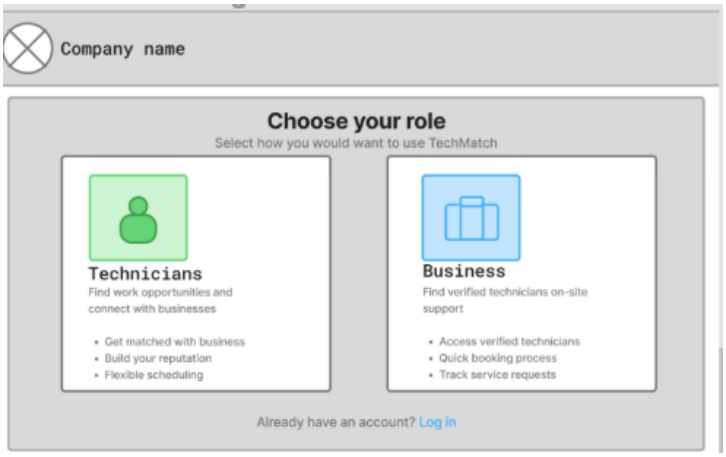
Backend logic

Users(with the least privilege)

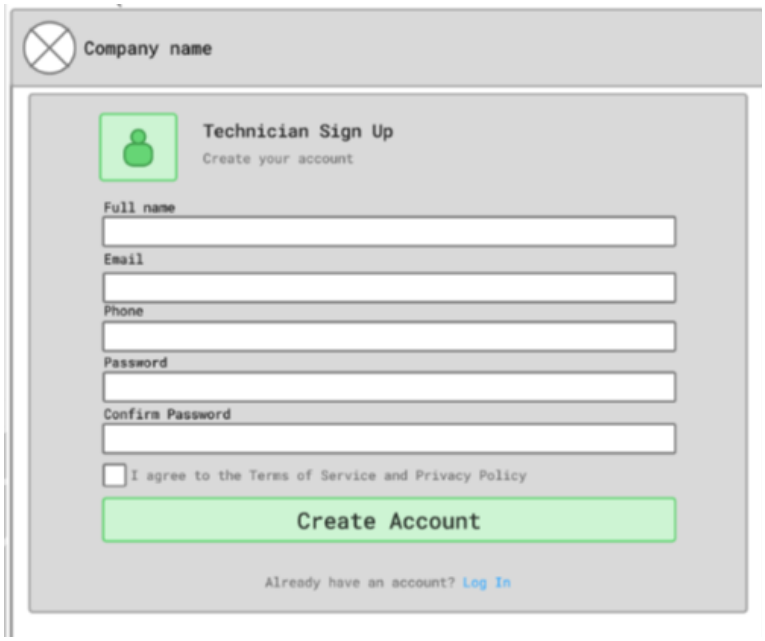
<u>Technicians</u>

1. New Technicians not under agency after signing up for TechMatch

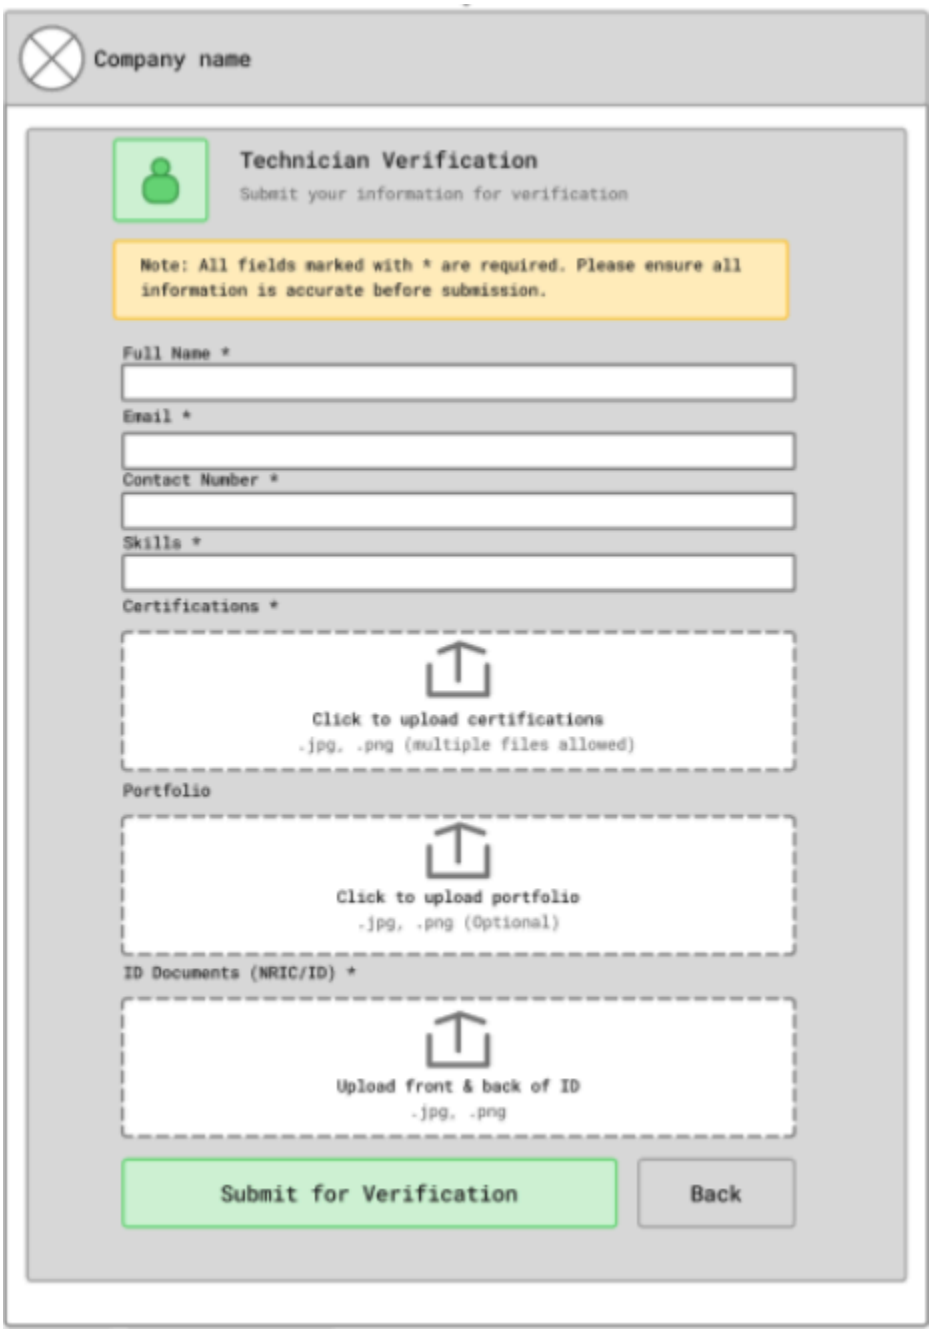
a. They have this account creation page, technician clicks on technician



b. Technician Sign up



c. Technician certification and information fill up



d. Pending prompt after signing up, if the user tries logging in will be told that their account verification is pending

e. After the account is created they will be able to log in to their account

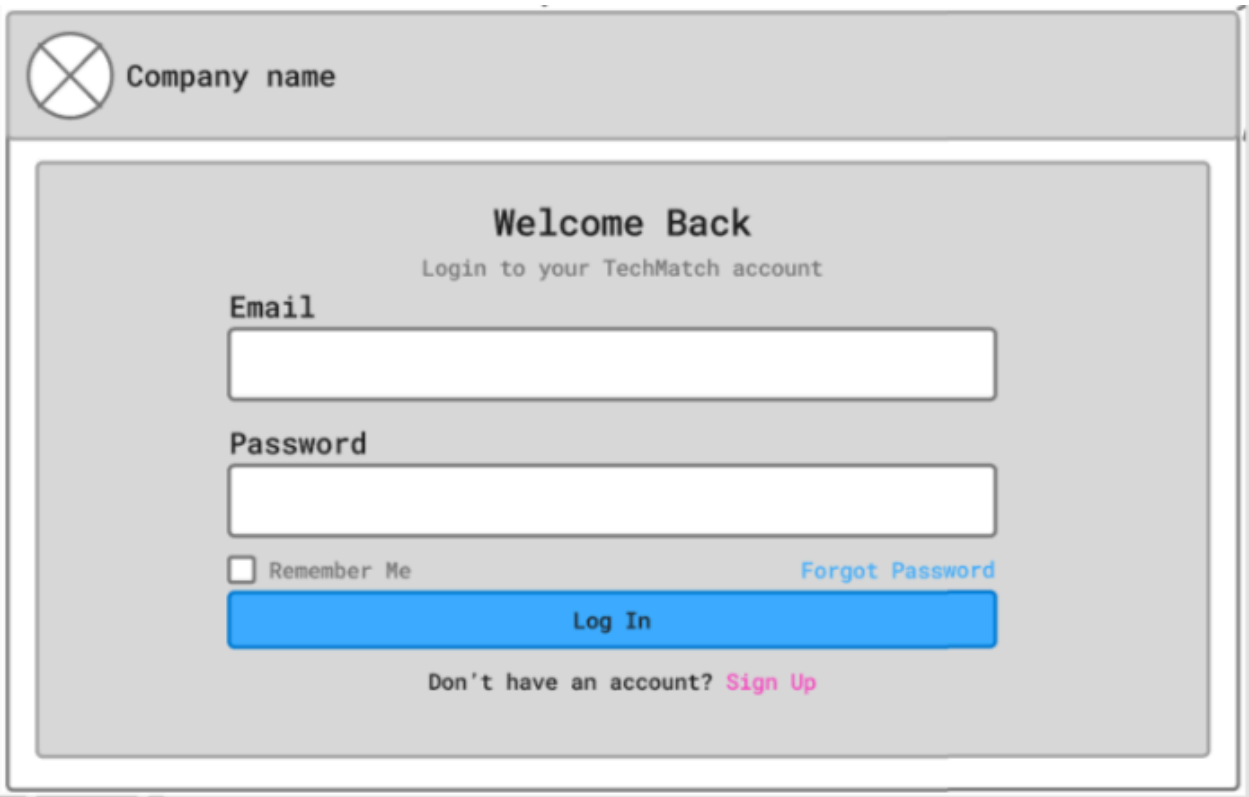
Admin verifies account later
System updates:
`is_verified = true`
Notification is saved in database

**Next time the user:**

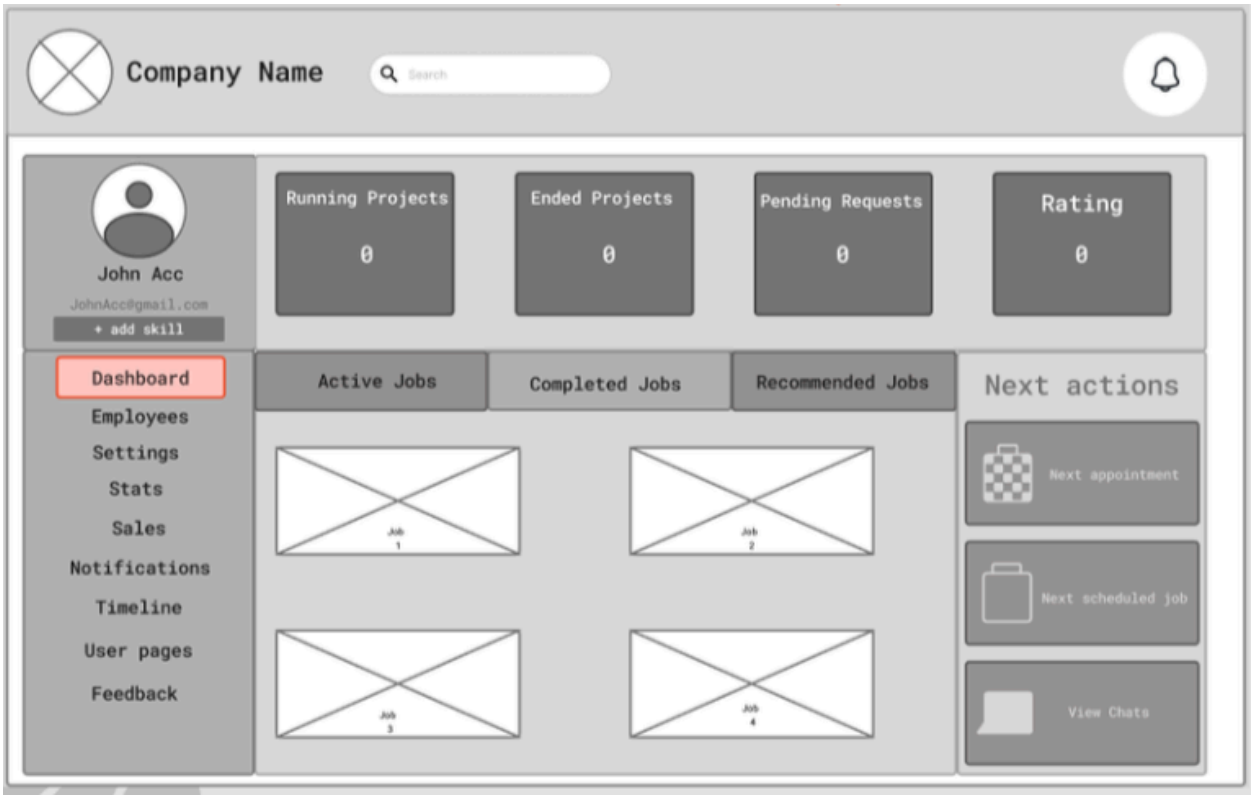
Logs in
Refreshes the page
Visits dashboard
They see:

🎉 **Your account has been verified! You may now accept jobs.**

2. Technicians that are under an agency
a. Agency makes the account from their dashboard, and adds the skills, skills are auto approved without need of admin verification as the agency is authorised
b. Technicians only need to log in
c. Once they log in they will be forced to chnage their password
d. They are then able to operate as normal technicians but Agency is able to control their accounts
3. Technician log in(after admin matters are settled)
a. Log in page



b. Ignore the navbar on the right i think those can be changed



Central workspace where technicians manage all job-related activities.

Key Functions Shown:

- Job overview:
  - Active Jobs
  - Completed Jobs
  - Recommended Jobs
- Performance indicators:
  - Ratings
  - Job history(Ended Projects/ Completed Jobs)
- Quick actions:
  - Next Appointment

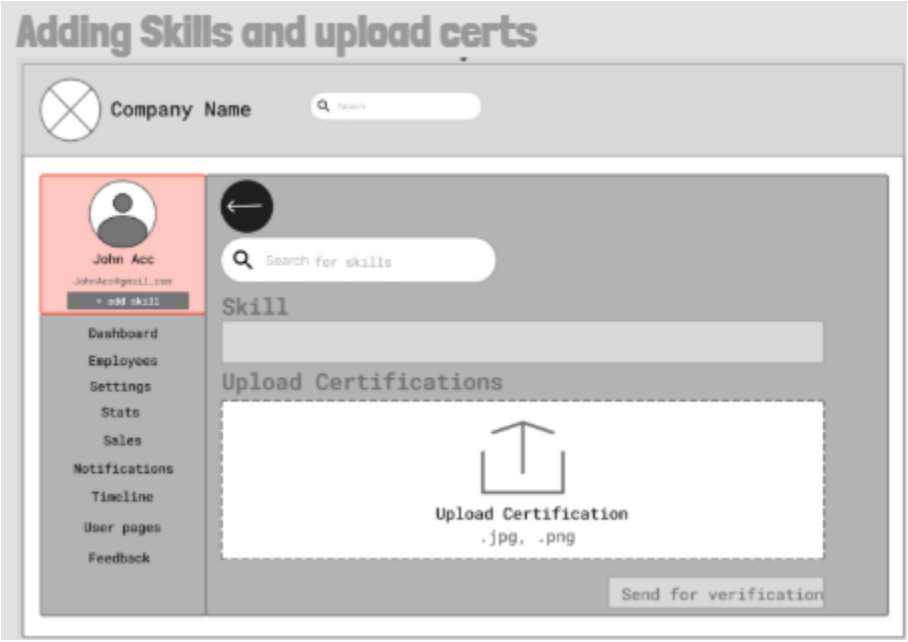
c. Ability to update skills and manage account(red is the area they click)

Key Functions:

- View and edit:
  - Name, contact details
  - Skills list
- Skill management:
  - Add new skills
  - Skills pending verification (max 3 at a time) -> So they wont spam skills until admin has approved some

d. Adding certs to skills

e. Adding skills and certs



And then something showing that the skill is still pending, until can be approved, then it will be under their personal portfolio that can be seen by businesses

And the technician profile that they can edit, basically they should be able to edit these without needing admin approval
